**Solar Photovoltaic Installer**

This 5.7 Credit Units (80 clock hour), 2 week-long course covers the design and installation of photovoltaic (PV) systems, and involves actual hands-on work with PV systems and equipment. This program is intended for contractors, electricians, utilities, engineers and other practitioners, with an overall goal of developing "system-knowledgeable" professionals to help ensure the safety and quality of PV system installations.

The course format includes a balance of classroom instruction (34 hours theory / 46 hours lab) and student-interactive exercises. These exercises include hands-on and demonstration laboratories that simulate the process of designing, installing and commissioning grid-connected PV systems, and are intended to develop the participant's working knowledge of PV systems and equipment. An emphasis is placed on code compliance and accepted state-of-the-art industry design and installation practice.

SPI training includes a hands-on project where students install a complete PV system in the classroom. This course prepares the student for the NABCEP Entry Level Exam which is administered the last day of class.

Students successfully completing this two-week course will be awarded a certificate of completion from the Mission Career College.

**Prerequisites**

1. High school diploma, GED, ATB.
2. Be at least 18 years of age.
3. Ability to speak read writes and understand the English language. Students born outside the USA should have language skills equal to a 4th level English as a Second Language (ESL) class.
